-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7, 8, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Feulner et al (6,366,393).

Feulner et al disclose a device for controlling an optical amplifier comprising: means (column 3; line 32, line 47 and lines 58-62) for receiving an optical wavelength division multiplexing signal having a number of channels of different wavelengths; means (201) for amplifying the optical wavelength multiplexed signal; means (710) for measuring the state of gain of the amplifier; and means (703 and 240) for detecting a change in input or output power.

The abstract teaches that by controlling the pump power directly in response to changes in input power, gain of the optical amplifier can be controlled within a sub-microsecond time scale.

The teachings recite above anticipate claim 7.

Claim 8 reads on the normal operating state of the amplifier.

The microprocessor (710) calculates and feeds its signal to the controller (220) and , as such, reads on claim 11.

Claim 12 reads on the memory of the microprocessor (710).

Art Unit: 3663

Claims 9-10 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The art cited shows the level of skill in the art.

Any inquiry concerning this communication should be directed to Mark Hellner at telephone number 571 272 6981.
